Trademarks

UPS OnLine® is a registered trademark of United Parcel Service of America, Inc. All other trademarks are the property of their respective owners.

Some of the UPS corporate applications use U.S. city, state, and postal code information obtained by United Parcel Service of America, Inc. under a non-exclusive license from the United States Postal Service.

Important Information

UPS OnLine Tools Shipping Tool:

Your development of an application using the UPS OnLine Tools Shipping Tool is governed by the UPS Technology Agreement or UPS Customer Technology Agreement you entered into with UPS. The following are key legal requirements from these agreements for the UPS OnLine Tools Shipping Tool. For more information on all requirements for the UPS OnLine Tools Shipping Tool, please refer to the UPS Technology Agreement or the Customer Technology Agreement.

Key Legal Requirements for UPS OnLine Tools Shipping Tool:

Permitted Territories. This document can only be used in the countries listed in Exhibit C of the UPS Technology Agreement or UPS Customer Technology Agreement.

Use. The application must not be designed to allow distribution of information received through the UPS OnLine Tools Shipping Tool to third parties, other than to persons having a bona fide interest in such information (e.g., the shipper, consignee or the third party payer).

UPS Account. You must design your application to only provide a user access to the UPS OnLine Tools Shipping Tool if the user has a UPS Account. Once the user provides UPS Account credentials, all tendered shipments manifested through the UPS OnLine Tools Shipping Tool must be billed to (1) Your UPS Account; or (2) a valid credit card account acceptable to UPS; or (3) a UPS account assigned by UPS to the consignee (this payment method also known as Freight Collect Billing); or (4) a UPS account assigned by UPS to a third party who has authorized You to use such UPS account for a tendered shipment (this payment method also known as Third Party Billing).

Consent to Use of UPS Mark.

- All screens or forms generated by your application including information received through the UPS OnLine Tools Shipping Tool must include (1) the UPS Mark positioned in reasonable proximity to the Information and of an appropriate size to readily identify the source of the Information as UPS and (2) the following language at the bottom of every screen that displays the UPS Mark: "UPS, the UPS brand mark, and the Color Brown are trademarks of United Parcel Service of America, Inc. All Rights Reserved". Except as set forth in the preceding sentence, you have no right to use the UPS Mark without the prior written approval of UPS.

-
- You shall not use the UPS Mark in association with any third party trademarks in a manner that might suggest co-branding or otherwise create potential confusion as to source or sponsorship of the application, or ownership of the UPS Mark.
 - The UPS Mark shall be used only as provided by UPS electronically or in hard copy form. The UPS Mark may not be altered in any manner, including proportions, colors, elements, etc., or animated, morphed or otherwise distorted in perspective or dimensional appearance.
 - The UPS Mark may not be combined with any other symbols, including words, logos, icons, graphics, photos, slogans, numbers or other design elements. A minimum amount of empty space must surround the UPS Mark separating it from any other object, such as type, photography, borders, edges, etc. The required area of empty space around the UPS Mark must be $\frac{1}{3}x$, where x equals the height of the UPS Mark.

Copyright and Proprietary Notices. You must include in your application and any POD Letters you prepare a prominent reproduction of UPS's copyright and proprietary notices in a form and format specified by UPS (See Copyright Section of this document).

Display of Information. The application must not display information concerning any other provider of shipping services or such other shipping services on any page, whether comprising one or more frames, displaying information your application receives from the UPS OnLine Tools Shipping Tool. Your application must present all data within each field received through the UPS OnLine Tools Shipping Tool without amendment, deletion or modification of any type.

Welcome to UPS OnLine® Tools

Welcome to the UPS OnLine Tools Developers Guide. This guide provides the information you need to begin using UPS OnLine Tools.

The UPS OnLine Tools offer a fast and convenient way to access UPS service information using the Internet. With these tools, UPS lets you easily incorporate UPS technology in your own applications or your own web site. Your users—running your applications or visiting your web site—can have up-to-the-minute access to UPS services.

How to Use this Guide

If you are an experienced developer, you can begin developing applications quickly after reviewing “Required Steps for Integrating with UPS OnLine Tools” for a brief overview of the tools.

If you would like a more step-by-step guide to developing and deploying UPS OnLine Tools, “Planning Your Applications” provides advice and describes options for developing and deploying applications and web sites that use UPS OnLine Tools.

The “UPS OnLine Tools Technologies” section explains key technologies on which the UPS OnLine Tools rely. That section also includes hints for using those technologies in various software development environments.

If you would like to learn more about what UPS OnLine Tools can do for your applications, “Understanding UPS OnLine Tools Shipping Services” explains the services that those tools offer.

For a complete technical reference to the OnLine Tools, “Shipping Reference” includes a complete programming reference.

Additional material, including reference tables and lists, may be found in the appendices.

What's New for January 2008

The .dtk Developer's Kit now contains a Tabular Interface Specification representing the request elements and response elements in a columnar format. Some additional descriptive clarifications are available in the Tabular Interface Specification.

Also, Sample request and response XML documents can be found in the .dtk Developer's Kit.

New functionality for January 2008:

- “Hundredweight” warning messages are now suppressed.
- The currency code abbreviation for Russia is now the Ruble (RUB). (Page 101.)

- OnCallPickup is now available for Germany origin shipments.
- Large Package is now available for Canada domestic shipments.
- Declared Value Type Code and Description (InsuredValue/Type/Code, InsuredValue/Type/Description) are now available at the package level. (See page 37).
- The Shipper can select to pay for Declared Value even when the Freight is paid by the Consignee or a third party.
- A new printer type (ZPL) is available for Zebra printers.
- New rules for Credit Card Validation require Security Code for validation. The SecurityCode element remains optional, and, if not present, CreditCard validation will fail.
- Multipiece domestic and international returns are now supported.
- Additional return origin countries are supported. (See Appendix E page 92)
- For Return Shipments the country codes must meet one of the following mutually exclusive conditions:
 - **Alternative One:** At least two of the following country codes must be the same: (ShipTo, ShipFrom, and Shipper)
 - **Alternative Two:** None of the following country codes are the same (ShipTo, ShipFrom, and Shipper) ...and all country codes ARE members of the EU.
 - **Alternative Three:** None of the following country codes are the same(ShipTo, ShipFrom, and Shipper)... and at least one of the country codes is not a member of the EU. Note: The shipper must have Third Country contract service:
- New error codes:
 - 121536 (See page 77)
 - 121537 (see page 77)
 - 121538 (see page 77)
 - 121539 (see page 77)
 - 129059 (see page 82)
 - 129090 (see page 82)

Required Steps for Integrating with UPS OnLine Tools

1. Review the UPS Technology Agreement available at www.ups.com. This agreement requires that you follow certain procedures and practices in using UPS OnLine Tools.
2. Develop applications that make use of standard HTTP communications protocols, SSL security, and XML-based document representations.
3. Test your application and/or web site using the designated UPS staging environment.
4. If you are a UPS Ready developer, review your application with UPS.
5. Obtain UPS Label Certification for your application. (If you are a new customer or if you haven't previously done so.
6. Deploy your application for your customers.

Planning Your Applications

Planning is a key part of any successful development activity, and UPS OnLine Tools applications are no exception. This section helps that planning by describing the important activities of any UPS OnLine Tools application project. It provides an overview of the steps required to develop applications, and it describes key factors and choices necessary to deploy those applications.

OnLine Tools Applications

Many different types of applications can take advantage of UPS OnLine Tools. Those application types include dedicated desktop applications, databases, web applications, and documents. The following figures illustrate some of the possibilities for applications using UPS OnLine Tools. The only essential requirement for all of these applications is that they must have access to the Internet.

Figure 1: Dedicated applications that users run on their desktops can access UPS OnLine Tools.

Figure 2: Database applications can access UPS OnLine Tools and return information to their clients.

Figure 3: Web sites can access UPS OnLine Tools and return information to users' web browsers.

Figure 4: Non-traditional applications such as Microsoft Office or Adobe Acrobat documents can use UPS OnLine Tools to automatically update their content.

The UPS OnLine Tools can be implemented withal of these types of applications and many others. Virtually any software that needs instant, up-to-date access to UPS services can take advantage of UPS OnLine Tools.

Licensing the UPS OnLine Tools

As part of the UPS Technology Agreement, users of the tools have certain obligations that are spelled out within the service agreement and its exhibits. Regardless of the manner in which the UPS OnLine Tools are integrated into your specific e-commerce web site or enterprise application, you must adhere to appropriate usage requirements.

Branding Requirements

UPS should receive attribution and branding in all applications (including websites and software applications) that use the OnLine Tools. No End

User, Third Party Developer or Access User should be permitted to use the OnLine Tools without providing branded recognition to UPS. Your use of the UPS logo can in no way imply endorsement, sponsorship or certification of your e-commerce web site or enterprise application by UPS. You are not allowed to use or alter the information returned by the UPS OnLine Tools in a way that misrepresents the information or the functionality of the service.

Developing Client Applications for OnLine Tools

When you develop software that uses the UPS OnLine Tools, you are building a client application. Because the UPS OnLine Tools rely on standard Internet-based technology, you can develop those applications using a wide variety of software development platforms, including Microsoft's Visual Studio, the Java Standard Edition and Enterprise Edition distributions, and many open source projects. This section introduces important technologies available in each of these development environments. Later sections of this document include more details on using each platform. Look for the icons in the left margin, which identify information relevant to a particular development environment.

Microsoft Visual Studio

Visual
Studio

Developers using the Microsoft Visual Studio environment can rely on the Microsoft XML Core Services (MSXML) for interacting with UPS OnLine Tools. Those services include functions to help applications create requests for and interpret responses, and they include functions to manage the communications between applications and UPS.

Java Standard Edition and Enterprise Edition

Java

Java developers can find all the classes they need for UPS OnLine Tools in the Java Standard Edition and Enterprise Edition distributions. The URL class in the java.net package provides the functions required for communication with UPS servers, and the Java API for XML Processing (JAXP) services let programs create requests and interpret responses from UPS.

Open Source

Open
Source

There are a number of open source efforts that include technology useful for creating OnLine Tools client applications; open source developers may find two particular projects to be especially helpful. The [libcurl](#) project is a library of functions that can manage the communications with UPS servers. For creating requests and interpreting responses, the [xerces](#) project provides essential functions in a variety of software languages.

Getting Technical Support

UPS provides technical support for developers who are using the UPS OnLine Tools Web Services. To get in touch with a UPS technical support engineer, fill out the technical support request form on the UPS web site.

Within the United States

Effective July 2007, there is a phone number for External Customer Technology Support (ECTS): 1-877-289-6420 6420 for customers who have completed testing in the Customer Integration Environment and are ready to process live shipments..

For developers in the United States, the request form may be found by selecting "Contact UPS" from the www.myups.com web site, or from www.ups.com from the steps below.

1. Navigate to the UPS website <http://www.ups.com>.
2. Select a language, (ex. United States – English).
3. Log into www.ups.com with your User ID and Password.
4. Click the "Business Solutions" tab.
5. Click "UPS OnLine Tools", and then click "Support" on the left-hand navigation window.
6. Click the link for technical support.
7. Complete the e-mail form. Please explain details about errors that are being returned, and under what circumstances.

Outside of the United States

Developers outside the United States can find the technical support request in the OnLine Tools page within the Business Solutions section of their country's UPS web site.

1. Navigate to the UPS website <http://www.ups.com>.
2. Select your country's home page and language (ex. United States – English).
3. Click "UPS OnLine Tools", on the left navigational pane.
4. Click the "Business Solutions" tab.
5. Click "Support," on the left navigational pane.
6. Select "Technical Support Question".

7. Complete the e-mail form. Please explain details about errors that are being returned, and under what circumstances.

For more information or assistance with UPS technical support, please contact your UPS OnLine Tools representative.

Testing and Deploying Applications

UPS maintains a special environment to support testing and staging of applications that rely on UPS OnLine Tools. This environment is called the Customer Integration Environment (CIE) and allows developers test and debug their applications by simulating transactions with UPS. The CIE site responds to requests just like the UPS production environment; however, it does not initiate actual UPS business services.

For example, if you send a shipping request to the UPS production site, a UPS driver may show up at your location expecting to pick up a package (and expecting payment for the service.) Sending the shipping request to CIE will avoid this problem.

UPS Label Certification

UPS requires that customers pass a Certification process prior to shipping actual (billable) packages. The Certification Process is as follows:

1. Ship five shipments in the Customer Integration Environment (CIE). These shipments must be valid shipments but may contain any combination of origins, destinations and services. At least one of these tests must produce a High Value Report by including a shipment with an InsuredValue greater than \$999.
2. Void the four UPS-defined "Void" test cases in CIE.
3. If you are using a Browser, e-mail the following 39 files along with your UPS OnLine "Developer's Key" to uoltects@ups.com:
 - The requests and responses of the ShipConfirm and ShipAccept XML documents from all five shipments (20 files).
 - The resulting GIF images of the label from all five shipments (5 files).
 - The resulting GIF images of the High Value Report for at least one shipment (1 file).
 - The HTML pages containing the scaling information for the label from all five shipments (5 files).
 - The requests and responses of all the Void XML documents (8 files).

4. If you are printing labels via a Thermal Printer, the labels must be sent to UPS via a provided label from the Tool support group. Include a High Value Report for at least one shipment with the thermal labels. Email the following 28 files along with your UPS OnLine “Developer’s Key” to uoltecs@ups.com:
 - The requests and responses of the ShipConfirm and ShipAccept XML documents from all five shipments (20 files).
 - The requests and responses of all the Void XML documents (8 files).
5. UPS will contact you within 2 business days to inform you of your approval status. Once approved, UPS will provide you with the Production URL.

Certification for third parties is described in the Product Provider Testing Guide.

Note: UPS reserves the right to revoke shipping privileges from any customers who fail to abide by the Certification Requirements outlined above.

Keeping Up-to-Date

As UPS adds new services and features, UPS OnLine Tools will evolve, offering more features and service benefits. Once you register to use UPS OnLine Tools, UPS will notify you by e-mail of updates and changes to the OnLine Tools. It is essential that an accurate e-mail address for your company be maintained. In addition, UPS recommends that you complete the secondary contact information to ensure that your organization receives the latest updates.

You should update your profile when changes occur or responsibilities for the OnLine Tools shift within your company. You can also return to the UPS Business Solutions area of ups.com for the latest updated information about UPS OnLine Tools.

UPS OnLine Tools Technologies

The foundation technologies for UPS OnLine Tools are the same underlying technologies in use on the Internet today. They include the Hypertext Transfer Protocol (HTTP) with Secure Sockets Layer (SSL) security and the Extensible Markup Language (XML). Because these technologies are critical to the Internet, most software development tools provide many powerful features that make it easy for application programs to use them. This section provides a quick introduction to the technologies and to the tools that can support them.

Hypertext Transfer Protocol and Secure Sockets Layer

Today's Internet supports a wide variety of applications including email, instant messaging, web browsing, and voice communications. All of these applications have a well-defined set of rules that determines how they communicate. Those rules are known as *protocols*. As an Internet application themselves, the UPS OnLine tools also rely on protocols to set the rules for their communications. The primary protocol for UPS OnLine Tools is the hypertext transfer protocol, or HTTP.

HTTP is a relatively simple protocol. An application that wants to use an OnLine Tool acts as an HTTP client. It sends its request to UPS as part of an HTTP POST message. UPS servers reply to each request using an HTTP response message.

Figure 5. UPS OnLine Tools accept requests from client applications in HTTP POST messages and reply to the requests with HTTP responses.

As part of the POST message, client applications indicate the type of content the message contains using an HTTP Content-Type header. For UPS OnLine Tools, that content type should be `application/x-www-form-urlencoded`. (Presently, Version 1.1 is supported)

In many cases the UPS OnLine tools exchange information that should be kept private. To protect confidential information, the UPS OnLine Tools rely on the Secure Sockets Layer (SSL) protocol in addition to HTTP. When two systems communicate using SSL, the protocol creates a

secure channel between them, and it encrypts all information that they exchange using this channel. The SSL protocol that UPS OnLine Tools use is the same protocol used to secure millions of on-line purchases on the web.

Figure 6: SSL creates a secure channel across a network and protects confidential communications using that channel.

Working with HTTP and SSL in Application Programs

UPS OnLine Tools are not the only Internet services that rely on the HTTP and SSL protocols. Both protocols, in fact, were originally developed for web browsing, and they provide the foundation for the majority of Internet applications. Because HTTP and SSL are so common, software development tools make using these protocols very simple.

Because HTTP and SSL are commonly used for web browsing, software development tools often rely on the same notation and abbreviations as standard web browsers. In particular, most tools identify a specific service (such as a UPS OnLine Tool) using a Uniform Resource Locator (URL). URLs begin with an abbreviation of the communication protocol. For UPS OnLine Tools that abbreviation will always be "https" to indicate HTTP and SSL. The protocol abbreviation is followed by a colon, two slashes, and the name of a server. Additional information about the specific service can follow the server name; it is written like the path to a file in a directory, with slashes separating individual folders. Figure 7 shows how a URL combines these individual components.

Figure 7. URLs identify communication protocols, servers, and specific services.

The subsections that follow provide brief introductions to using HTTP and SSL with various software development tools, including Microsoft Visual Studio, Java Standard and Enterprise Edition, and popular open source environments.

Microsoft Visual Studio

Visual Studio

The Microsoft Visual Studio environment includes many tools, classes, and libraries that simplify the use of HTTP and SSL protocols. A very convenient set of tools are included in the Microsoft XML Core Services (MSXML). The following code fragment shows how a Visual Basic program can send a request and retrieve the response. To keep the example as simple as possible, no exception handling is included in the figure. Production software should, of course, appropriately handle all exceptions.

```
' create the object that manages the communication
Dim oXMLHttp As XMLHTTP
Set oXMLHttp = New XMLHTTP

' prepare the HTTP POST request
oXMLHttp.open "POST", "https://www.server.com/path", False
oXMLHttp.setRequestHeader "Content-Type", _
    "application/x-www-form-urlencoded"

' send the request
oXMLHttp.send requestString

' server's response will be available in oXMLHttp.responseXML
```

Figure 8. Visual Basic programs can use features of the MSXML tools to send and receive messages using HTTP and SSL.

Java Standard Edition and Enterprise Edition

Java

In a Java SE or EE environment, the URL class in the java.net package provides a convenient way to manage HTTP and SSL communications. Figure 9 contains a small code fragment that demonstrates the use of this class. As above, the fragment doesn't include exception handling that should be inherent in any production software.

```
import java.io.*;
import java.net.*;

URL url = new URL("https://www.server.com/path");
URLConnection conn = (URLConnection) url.openConnection();
conn.setRequestMethod("POST");
conn.setRequestProperty("Content-Type",
    "application/x-www-form-urlencoded");
conn.setDoOutput(true);
PrintWriter out = new PrintWriter(conn.getOutputStream());
out.println(requestString);
out.close();
BufferedReader in = new BufferedReader(
    new InputStreamReader(conn.getInputStream()));
/* server response is available by reading the in object */
```

Figure 9. The URL class from the java.net package is a convenient way for Java programs to use HTTP and SSL.

Open Source

Open
Source

The libcurl project is an open source project that includes support for using HTTP and SSL protocols. The fragment in Figure 10 shows how to set up libcurl to send a request using HTTP and SSL. It relies on a callback function to accept the server's response.

```
CURL *curl;
CURLcode res;

/* prepare to send the request */
curl = curl_easy_init();
curl_easy_setopt(curl, CURLOPT_URL, "https://www.server.com/path");
curl_easy_setopt(curl, CURLOPT_POSTFIELDS, requestString);
curl_easy_setopt(curl, CURLOPT_WRITEFUNCTION, fnCallback);

res = curl_easy_perform(curl);
```

Figure 10. The open source libcurl library simplifies the use of HTTP and SSL.

Extensible Markup Language (XML)

The Extensible Markup Language (XML) is an international standard developed by the World Wide Web Consortium, the governing body for web standards and guidelines. XML provides a way to identify the structure of content within a document or, in the case of UPS OnLine tools, a message. Figure 11 shows how a simple XML message could describe a book.

```
<?xml version="1.0" encoding="UTF-8" ?>
<book>
  <title>
    HTTP Essentials: Protocols for Secure, Scaleable Web Sites
  </title>
  <author>
    <firstname>
      Stephen
    </firstname>
    <lastname>
      Thomas
    </lastname>
  </author>
  <publisher>
    John Wiley and Sons
  </publisher>
  <year>
    2001
  </year>
  <isbn>
    0-471-398233
  </isbn>
</book>
```

Figure 11: XML identifies the structure of documents, as in this document describing a book.

As the figure illustrates, XML is a text-based format. XML messages contain regular text, though that text follows specific rules that XML defines. XML distinguishes different parts of a message with a label known as a *tag*. Tags in the example include `<book>`, `<title>`, `<author>`, `<firstname>`, etc. A tag can indicate the start of information if it begins with an angle bracket (`<`), and a tag can indicate the end of information if it begins with an angle bracket and a slash (`</`). A beginning tag, ending tag, and the information between the two make up an *element*. In this example the publisher element tells us that the publisher for the book is "John Wiley and Sons."

The figure also shows how an XML message follows a defined structure. Elements can be contained within other elements, as `<firstname>` and `<lastname>` are included within the `<author>` element. This structure indicates that `firstname` and `lastname` are "children" of the `author` "parent."

Although XML elements can contain almost any text, there are two special characters that cannot appear within an element. Those characters are the less-than sign (`<`) and the ampersand (`&`). Elements that include these contents must replace the special characters with `<` or `&` respectively. The name of a large telecommunications company, for example, would appear as `AT&T` within an XML message.

Because XML is a text-based format, software has to take extra steps to use XML with binary data. For example, some UPS services return binary image data such as the image of a shipping label. To include this data in an XML message, UPS converts it from binary to text format using an algorithm known as *Base64 encoding*. The "The Base16, Base32, and Base64 Data Encodings" standard, also known as [RFC 3548](#), defines that algorithm.

Although XML messages consist of a series of text characters, most software development tools represent XML messages in a tree-like data structure. That representation clarifies the structure of the message. Figure 12 shows the same XML message as Figure 11, but it uses a more visual representation to highlight the message's structure.

Figure 12. It is often convenient to show XML messages in a tree-like graph to highlight their structure.

The example of Figure 11 and Figure 12 is a relatively simple XML message with just a few elements. UPS OnLine Tools rely on XML messages that are larger than this simple example, and it is difficult to show them in a pure graph like Figure 12 without losing legibility. Figure 13 shows an alternate way of depicting the tree-like structure of XML messages; it uses the same example as before.

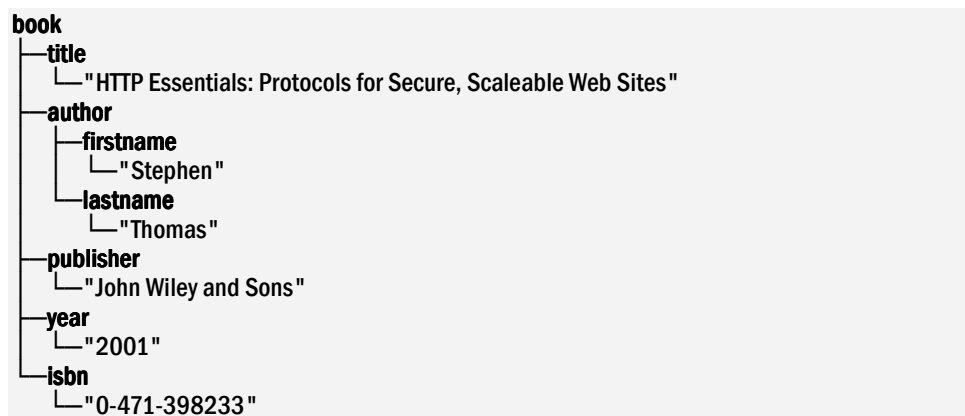

Figure 13. It is possible to show the tree-like structure of XML messages using text.

A great deal of information on XML is available on the Internet. A good starting point for further research is the World Wide Web Consortium's main page on XML at <http://www.w3.org/XML/>.

Working with XML in Application Programs

The popularity of Extensible Markup Language means that nearly all development environments include sophisticated support for creating and interpreting XML messages. This subsection provides a brief introduction to working with XML in Microsoft, Java, and Open Source environments.

The examples it contains are only representative approaches; many other approaches are possible.

Microsoft Visual Studio

Visual Studio

The [Microsoft XML Core Services \(MSXML\)](#) offers one way to work with XML documents in Visual Studio applications. Figure 14 shows one approach for creating an XML message in Visual Basic, and Figure 15 demonstrates how Visual Basic programs can interpret XML responses. To remain as simple as possible, the examples do not include any exception handling. Production software should, of course, provide full exception handling.

```
' Define a variable and initialize it to a new XML message
Dim dom
Set dom = New DOMDocument30

' Set properties of the variable
dom.async = False
dom.validateOnParse = False
dom.resolveExternals = False
dom.preserveWhiteSpace = True

' Identify the message as XML version 1.0
Set node = dom.createProcessingInstruction("xml", "version='1.0'")
dom.appendChild node
Set node = Nothing

' Create the root (book) element and add it to the message
Dim root
Set root = dom.createElement("book")
dom.appendChild root

' Create child elements and add them to the root
Dim node
Set node = dom.createElement("title")
node.text = "HTTP Essentials: ..."
root.appendChild node
Set node = Nothing

Set node = dom.createElement("author")
Dim child
Set child = dom.createElement("firstname")
child.text = "Stephen"
node.appendChild child
Set child = Nothing
Set child = dom.createElement("lastname")
child.text = "Thomas"
node.appendChild child
root.appendChild node

' And so on
```

Figure 14. Visual Basic can create XML messages through the DOMDocument object.

```
' Define a variable to hold the parsed message
Dim dom As New DOMDocument30
dom.async = False
dom.validateOnParse = False
dom.resolveExternals = False
dom.preserveWhiteSpace = True

' Try to parse the message
If dom.loadXML(messageText) = False Then
    ' The text did not contain valid XML
```

```

End If

' Get the title information from the message
Dim node As IXMLDOMNode
Set node = dom.selectSingleNode("/title")
If node Is Nothing Then
    ' The message did not contain title information
Else
    ' Do something with node.text
End If

```

Figure 15. Visual Basic can read the contents of XML messages after parsing them with the XmlDocument object.

Visual Basic also has built-in classes to interpret Base64-encoded values. The `Convert.FromBase64String()` function converts from a Base64-encoded string to an array of 8-bit unsigned integers.

Java Standard Edition and Enterprise Edition

Java

The Java API for XML Processing (JAXP) is the preferred approach for working with XML messages in Java. Figure 16 shows how a `BookClass` object can be converted into an XML message, a process that JAXP calls *marshalling*. Similarly, Figure 17 shows the reverse process, where an XML message is converted into a `BookClass` object. This reverse process is *unmarshalling*. As above, exception handling code is omitted from these examples to make them as clear as possible.

```

import javax.xml.bind.JAXBContext;
import javax.xml.bind.Marshaller;
import java.io.StringWriter;

/* create the book object */
BookClass book = new BookClass("HTTP Essentials...",
    new AuthorClass("Stephen", "Thomas"),
    "John Wiley and Sons",
    "2001",
    "0-471-398233");

/* convert it to an XML string */
StringWriter writer = new StringWriter();
JAXBContext context = JAXBContext.newInstance(book.class);
Marshaller m = context.createMarshaller();
m.marshal(book, writer);

```

Figure 16. JAXP provides a convenient way for Java applications to create XML messages from Java objects.

```

import javax.xml.bind.JAXBContext;
import javax.xml.bind.Unmarshaler;
import java.io.StringReader;

/* xmlMessage contains the XML message */
StringReader reader = new StringReader(xmlMessage);
JAXBContext context = JAXBContext.newInstance(Book.class);
Unmarshaler u = context.createUnmarshaller();
BookClass book = (BookClass) u.unmarshal(reader);

/* access properties of the book */
System.out.println(book.getAuthor().getFirstname())

```

Figure 17. JAXP also gives Java applications a convenient way to retrieve elements from an XML message.

Open Source

Open Source

As of this writing, the most popular open source tool for working with XML is the [xerces](#) project. That project includes C++, Java, and Perl implementations of an XML library. The xerces distribution includes extensive sample applications. The code fragment in Figure 18 demonstrates creating an XML message in C++ with the xerces library. Figure 19 shows sample code for accessing an element within an XML message. In both cases exception handling is not shown in order to keep the examples as simple as possible. Production software should always contain full exception handling.

```
DOMImplementation* impl =
    DOMImplementationRegistry::getDOMImplementation(X("Core"));

DOMDocument* doc = impl->createDocument(0, X("book"), 0);
DOMElement* rootElem = doc->getDocumentElement();

DOMElement* titleElem = doc->createElement(X("title"));
rootElem->appendChild(titleElem);

DOMText* titleVal = doc->createTextNode(X("HTTP Essentials..."));
titleElem->appendChild(titleVal);
```

Figure 18. The Xerces C++ library includes classes that can create XML messages.

```
XMLCh* TAG_book;
XMLCh* TAG_title;
xercesc::XercesDOMParser *parser;

XMLPlatformUtils::Initialize();
TAG_book = XMLString::transcode("book");
TAG_title = XMLString::transcode("title");

parser = new XercesDOMParser;
parser->parse(inputText);
DOMDocument* xmlDoc = parser->getDocument();
DOMElement* elementRoot = xmlDoc->getDocumentElement();
DOMNodeList* children = elementRoot->getChildNodes();
const XMLSize_t nodeCount = children->getLength();
for (XMLSize_t cnt = 0; cnt < nodeCount; ++cnt ) {
    DOMNode* currentNode = children->item(cnt);
    if( currentNode->getNodeType() == DOMNode::ELEMENT_NODE ) {
        DOMElement* currentElement =
            dynamic_cast< xercesc::DOMElement* >( currentNode );
        if( XMLString::equals(currentElement->getTagName(),
                               TAG_title) ) {
            /* do something with the title */
        }
    }
}
```

Figure 19. The Xerces C++ library also supports parsing XML messages to find individual elements.

Understanding UPS OnLine Tools Shipping Services

This section provides an overview of the OnLine Tools Shipping Services. It describes the services available through the OnLine Tools, and it explains—at an overview level—how the tools operate. The next section, "Shipping Reference," documents the details of the Shipping Services OnLine Tools operations.

What Shipping Services Can Do

OnLine Tools make UPS shipping services available to client applications that communicate with UPS using the Internet. With the OnLine Tools applications can prepare or schedule small package shipments, manage returns, or cancel previously scheduled shipments.

Shipments

OnLine Tools Shipping Services give your applications many ways to manage the shipment of small packages to their destination. UPS offers a range of delivery time frames from same day to standard ground transportation. Shipments may be within the United States or international, and they may range from letter documents to large packages. (Note: for freight services, please refer to UPS OnLine Tools designed for freight services.)

UPS also supports many valued added services for shipments, including collect on delivery (COD), declared value, delivery confirmation, and automatic notification of delivery status.

For full details on all UPS shipping services, please consult the latest *UPS Rate and Service Guide* available at <http://www.ups.com>. Note that these shipments are sometimes called *forward shipments* or *outbound shipments* to distinguish them from returns.

Cancellations (Voids)

If you need to cancel a previously processed shipment, the UPS OnLine Tools Shipping Services let client applications automate that task. This process is known as *voiding* a shipment.

Returns

UPS OnLine Tools also support the UPS returns services. Either as part of a forward shipment or in a separate process, clients can request a return label for their customers. (Note: UPS can provide a label for a return shipment even if it did not provide a label for the forward shipment.) With return services, you can include a label in an outbound shipment, ask UPS to email or mail the return label to your customer, or request a UPS driver to pick up the package at the your customer's location. As with

forward shipments, details on return shipment services can be found in the latest *UPS Rate and Service Guide* at <http://www.ups.com>.

How Shipping Services Work

Because forward and return shipments share many of the same characteristics (they have an origin, destination, service type, etc.), UPS OnLine Tools use the same procedure and message types for both services. Cancelling or voiding a shipment requires its own procedure and message types.

Forward and Return Shipments

For forward and return services client applications use a four-step procedure to process a shipment. As Figure 20 shows, the procedure begins when a client application sends a `ShipmentConfirmRequest` to UPS. This request provides details of the shipment and the desired UPS services. UPS replies to this request with a `ShipmentConfirmResponse`. `ShipmentConfirmResponses` include estimated rates for the shipment. If the rates and services are acceptable to the client, it sends a `ShipmentAcceptRequest` to UPS. This message authorizes UPS to charge for the shipment and process the shipment data. UPS acknowledges the request by returning a `ShipmentAcceptResponse`. For forward shipments and for preprinted return labels, this response includes a label for the shipment.

Figure 20. Forward and return shipments require four separate steps to complete the shipment processing.

Clients that want to include preprinted labels as part of forward shipments must perform this four-step procedure twice. One time processes the forward shipment, and the second time retrieves the return label.

Cancellations (Voids)

To cancel, or *void*, a previously scheduled shipment, client applications send a `VoidShipmentRequest` to UPS. As Figure 21 illustrates, UPS replies to this request with a `VoidShipmentResponse`.

Figure 21. `VoidShipmentRequest` messages let client applications cancel a previously scheduled shipment.

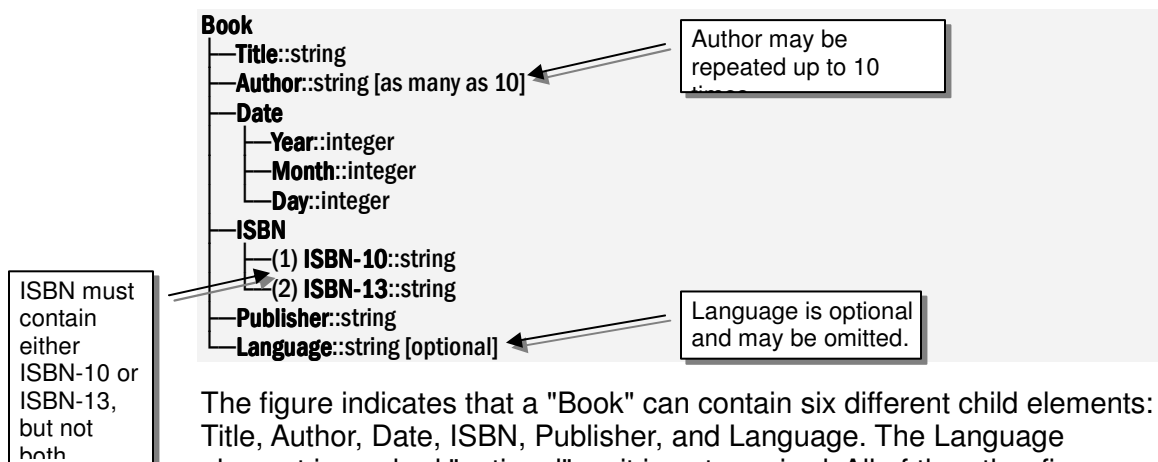

Applications may void forward shipments up to 28 days after initially processing them. Return shipments must be voided within 24 hours.

Shipping Reference

This section documents the details of the XML messages, including the requests that clients send to UPS and the responses that UPS returns. The first subsection explains the notation that this section uses. It is followed by a section that describes how UPS verifies that client applications are authorized to use the tool. The next subsections define the messages used by the tool for its services. The final subsection provides a list of error codes.

Describing OnLine Tools Messages

As noted previously, all messages that UPS OnLine Tools send and receive consist of XML documents. This reference section defines the specific elements within those XML documents. Because XML documents follow a defined structure, this reference shows those elements using a compact, graphical notation. Here is an example of that notation, with some additional annotations to highlight important conventions:

The figure indicates that a "Book" can contain six different child elements: Title, Author, Date, ISBN, Publisher, and Language. The Language element is marked "optional" so it is not required. All of the other five elements are required, however. Notice that the Author element can appear as many as ten times within the Book document. (The technical name for this property is *cardinality*.)

Some of the child elements can themselves contain child elements. The Date element, for example, consists of a Year element, a Month element, and a Day element.

Finally, notice that the children of the ISBN element (ISBN-10 and ISBN-13) have a number in parentheses preceding them. This number indicates a choice. In this example, the ISBN element must have either an ISBN-10 child element or an ISBN-13 child element, but it cannot have both.

If an element has no child elements, the notation convention shows the type of content that the element can contain. In the example, Year, Month, and Day must contain integer numbers, while other primitive elements can contain arbitrary text strings.

Authenticating Client Applications

UPS OnLine Tools Shipping Services are only available for authorized UPS customers. To enforce this policy, UPS requires that every message that a client application sends include important authentication information. That information is contained in an AccessRequest XML document that must begin each message.

AccessRequest

```
AccessRequest
├── AccessLicenseNumber::string
├── UserId::string
└── Password::string
```

Each AccessRequest contains three child elements: an AccessLicenseNumber, a UserId, and a Password. The following figure shows an example AccessRequest document.

```
<?xml version="1.0" ?>
<AccessRequest xml:lang='en-US'>
  <AccessLicenseNumber>
    YOURACCESSLICENSENUMBER
  </AccessLicenseNumber>
  <UserId>
    YOURUSERID
  </UserId>
  <Password>
    YOURPASSWORD
  </Password>
</AccessRequest>
```

Forward Shipments

Four different message types make up a complete shipment processing procedure: ShipmentConfirmRequest, ShipmentConfirmResponse, ShipmentAcceptRequest, and ShipmentAcceptResponse.

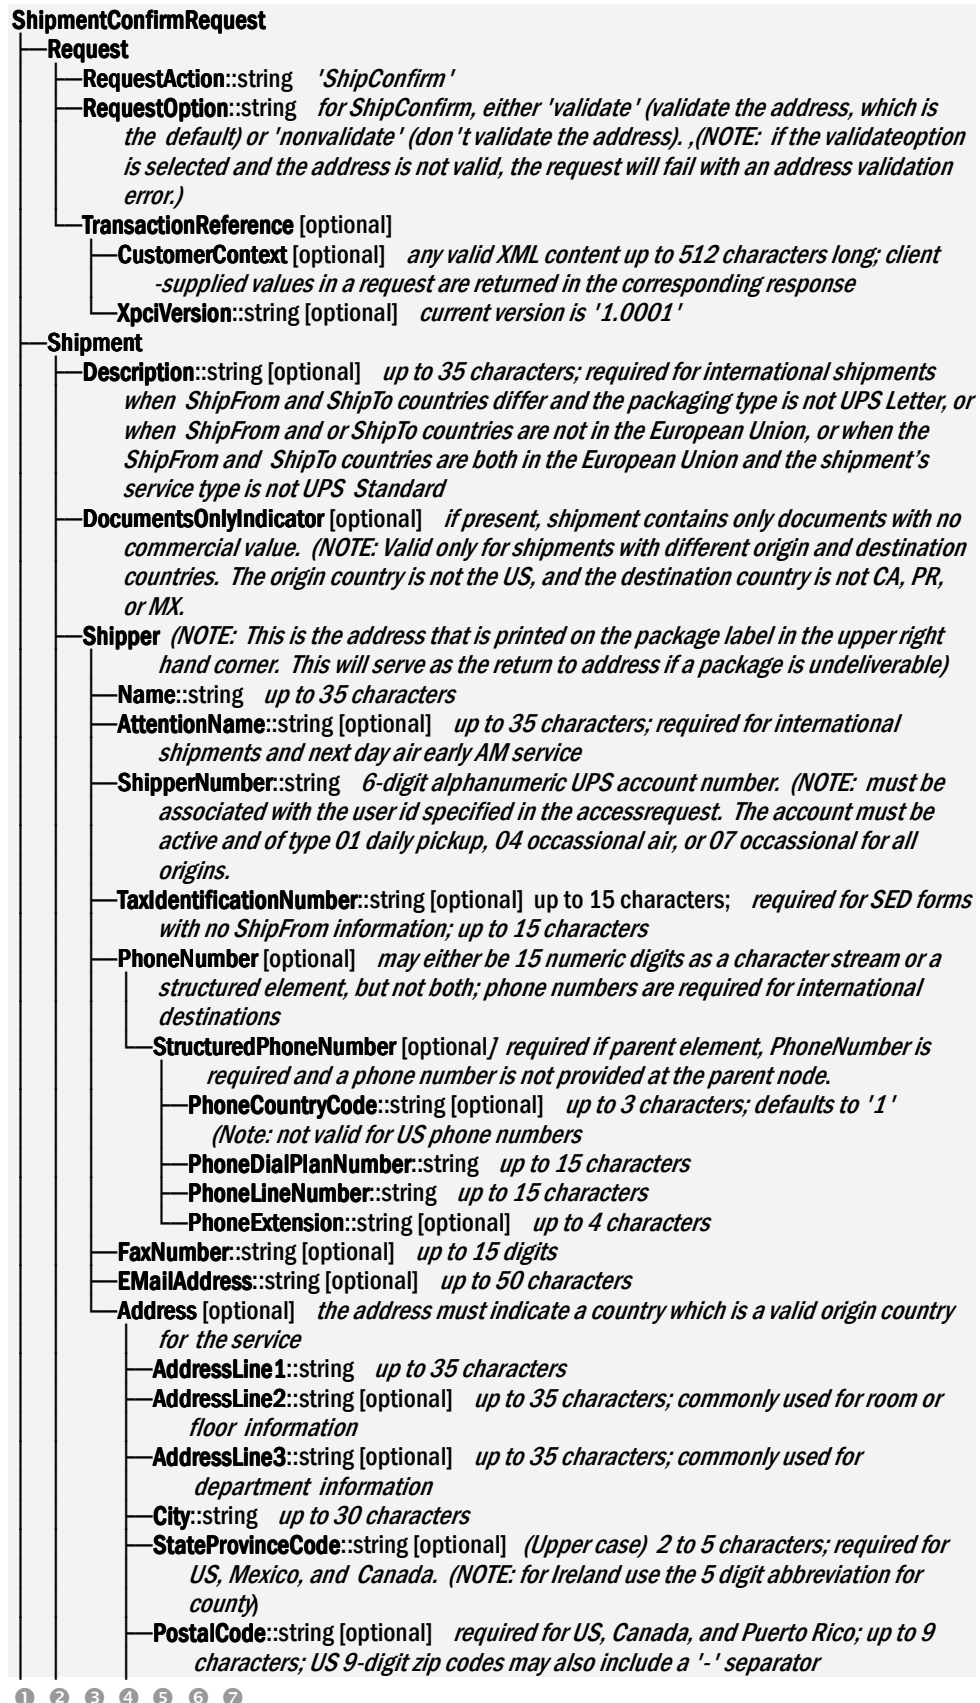

(Forward) ShipmentConfirmRequest

The ShipmentConfirmRequest message consists of two complete XML documents. The first document is an AccessRequest. The AccessRequest is immediately followed by (concatenated to) a ShipmentConfirmRequest. When a client application is undergoing testing and integration, the document combination should be sent to the URL:

<https://wwwcie.ups.com/ups.app/xml/ShipConfirm>

Once a client application is in production, the combined documents should be sent to the URL provided as part of the certification process.

The ShipmentConfirmRequest document in the request must conform to the following XML structure.

(Forward) ShipmentConfirmRequest XML Details:

1 2 3 4 5 6 7

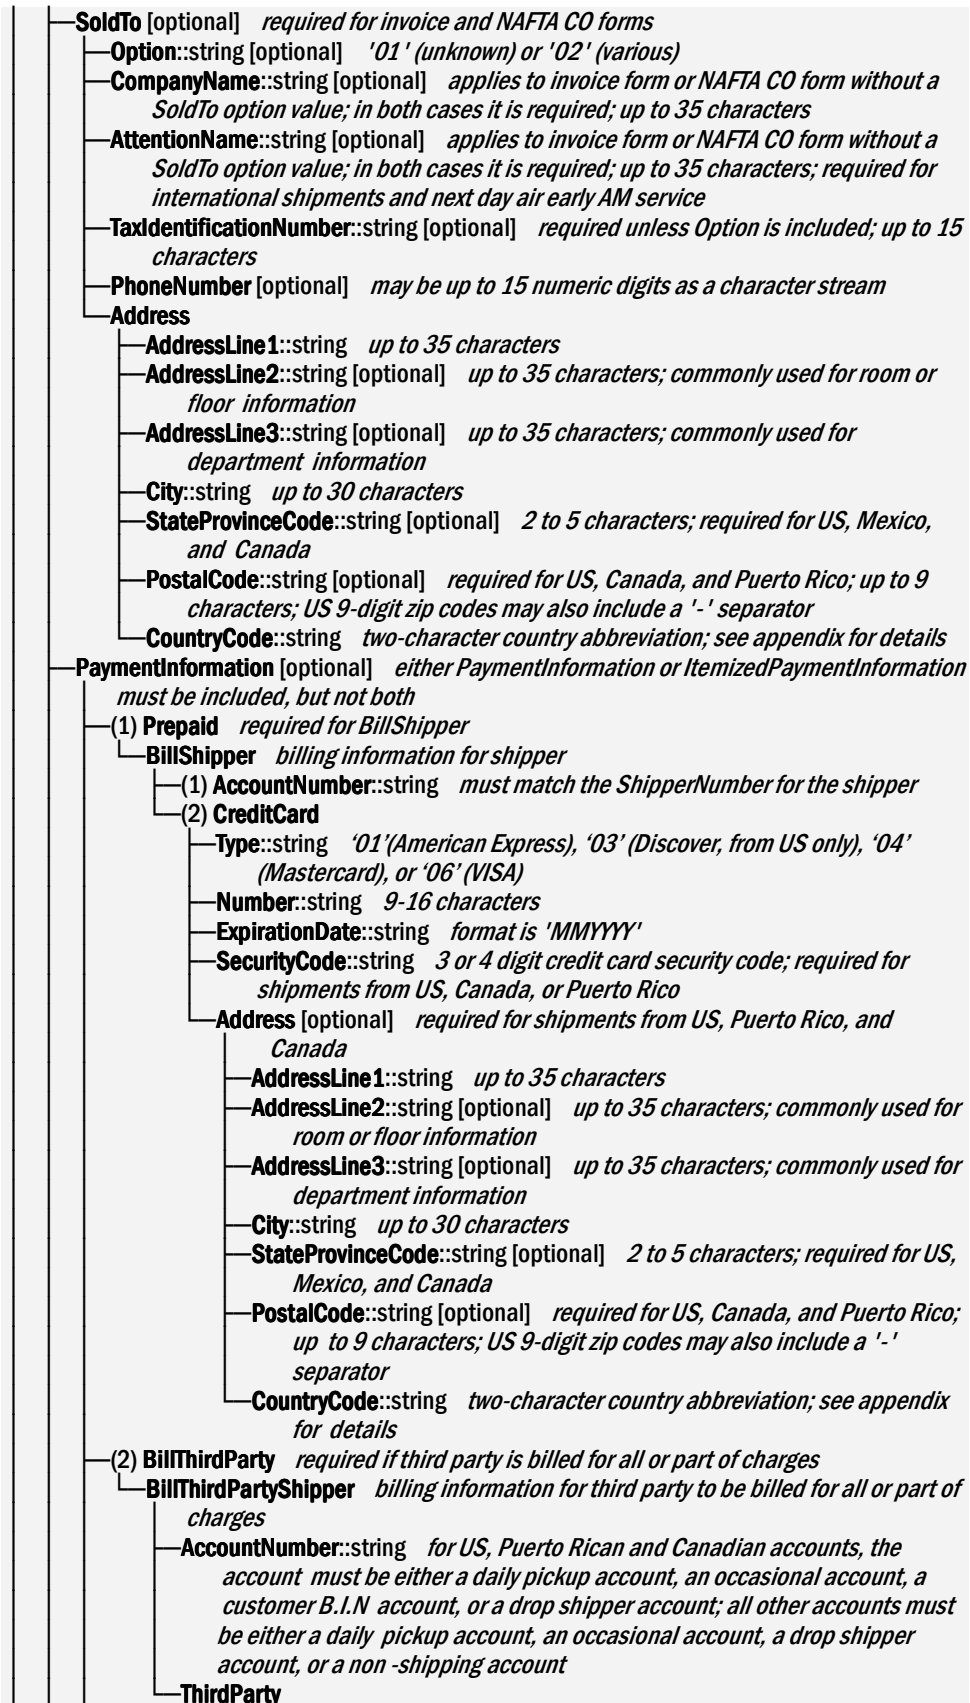

```

    CountryCode::string two-character country abbreviation; see appendix for details
  ShipTo
    CompanyName::string up to 35 characters
    AttentionName::string [optional] up to 35 characters; required for international
      shipments and next day air early AM service
    TaxIdentificationNumber::string [optional] up to 15 characters
    PhoneNumber [optional] may either be numeric digits as a character stream or a
      structured element, but not both; phone numbers are required for international
      destinations and UPS Next Day Air Early AM shipments
    StructuredPhoneNumber [optional]
      PhoneCountryCode::string [optional] up to 3 characters; defaults to '1'
      PhoneDialPlanNumber::string up to 15 characters
      PhoneLineNumber::string up to 15 characters
      PhoneExtension::string [optional] up to 4 characters
    FaxNumber::string [optional] up to 15 digits
    EMailAddress::string [optional] up to 50 characters
    Address
      AddressLine1::string up to 35 characters
      AddressLine2::string [optional] up to 35 characters; commonly used for room or
        floor information
      AddressLine3::string [optional] up to 35 characters; commonly used for
        department information
      City::string up to 30 characters
      StateProvinceCode::string [optional] 2 to 5 characters; required for US, Mexico,
        and Canada. (NOTE: for Ireland use the 5 digit abbreviation for county)
      PostalCode::string [optional] required for US, Canada, and Puerto Rico; up to 9
        characters; US 9-digit zip codes may also include a '-' separator
      CountryCode::string two-character country abbreviation; see appendix for details
      ResidentialAddress if present, address is for a residence
    LocationID::string [optional] 3-10 characters; restricted to numbers or upper case
      letters
  ShipFrom [optional] required if pickup location differs from shipper's address (NOTE: The
    shipment will be rated from this origin address to the destination ship-to address.
    CompanyName::string up to 35 characters
    AttentionName::string [optional] up to 35 characters; required for international
      shipments and next day air early AM service
    TaxIdentificationNumber::string [optional] required for SED forms; up to 15 characters
    PhoneNumber [optional] may either be numeric digits as a character stream or a
      structured element, but not both; phone numbers are required for international
      destinations
    StructuredPhoneNumber [optional]
      PhoneCountryCode::string [optional] up to 3 characters; defaults to '1'
      PhoneDialPlanNumber::string up to 15 characters
      PhoneLineNumber::string up to 15 characters
      PhoneExtension::string [optional] up to 4 characters
    FaxNumber::string [optional] up to 15 digits
    Address
      AddressLine1::string up to 35 characters
      AddressLine2::string [optional] up to 35 characters; commonly used for room or
        floor information
      AddressLine3::string [optional] up to 35 characters; commonly used for
        department information
      City::string up to 30 characters
      StateProvinceCode::string [optional] 2 to 5 characters; required for US, Mexico,
        and Canada
      PostalCode::string [optional] required for US, Canada, and Puerto Rico; up to 9
        characters; US 9-digit zip codes may also include a '-' separator
      CountryCode::string two-character country abbreviation; see appendix for details

Return Shipments

Four different message types make up a complete return shipment processing procedure: ShipmentConfirmRequest, ShipmentConfirmResponse, ShipmentAcceptRequest, and ShipmentAcceptResponse.

(Return)Shipment Confirm Request

The Return ShipmentConfirmRequest message contains a single XML document that conforms to the following structure.

(Return) ShipmentConfirmRequest XML Details:

1 2 3 4 5 6 7

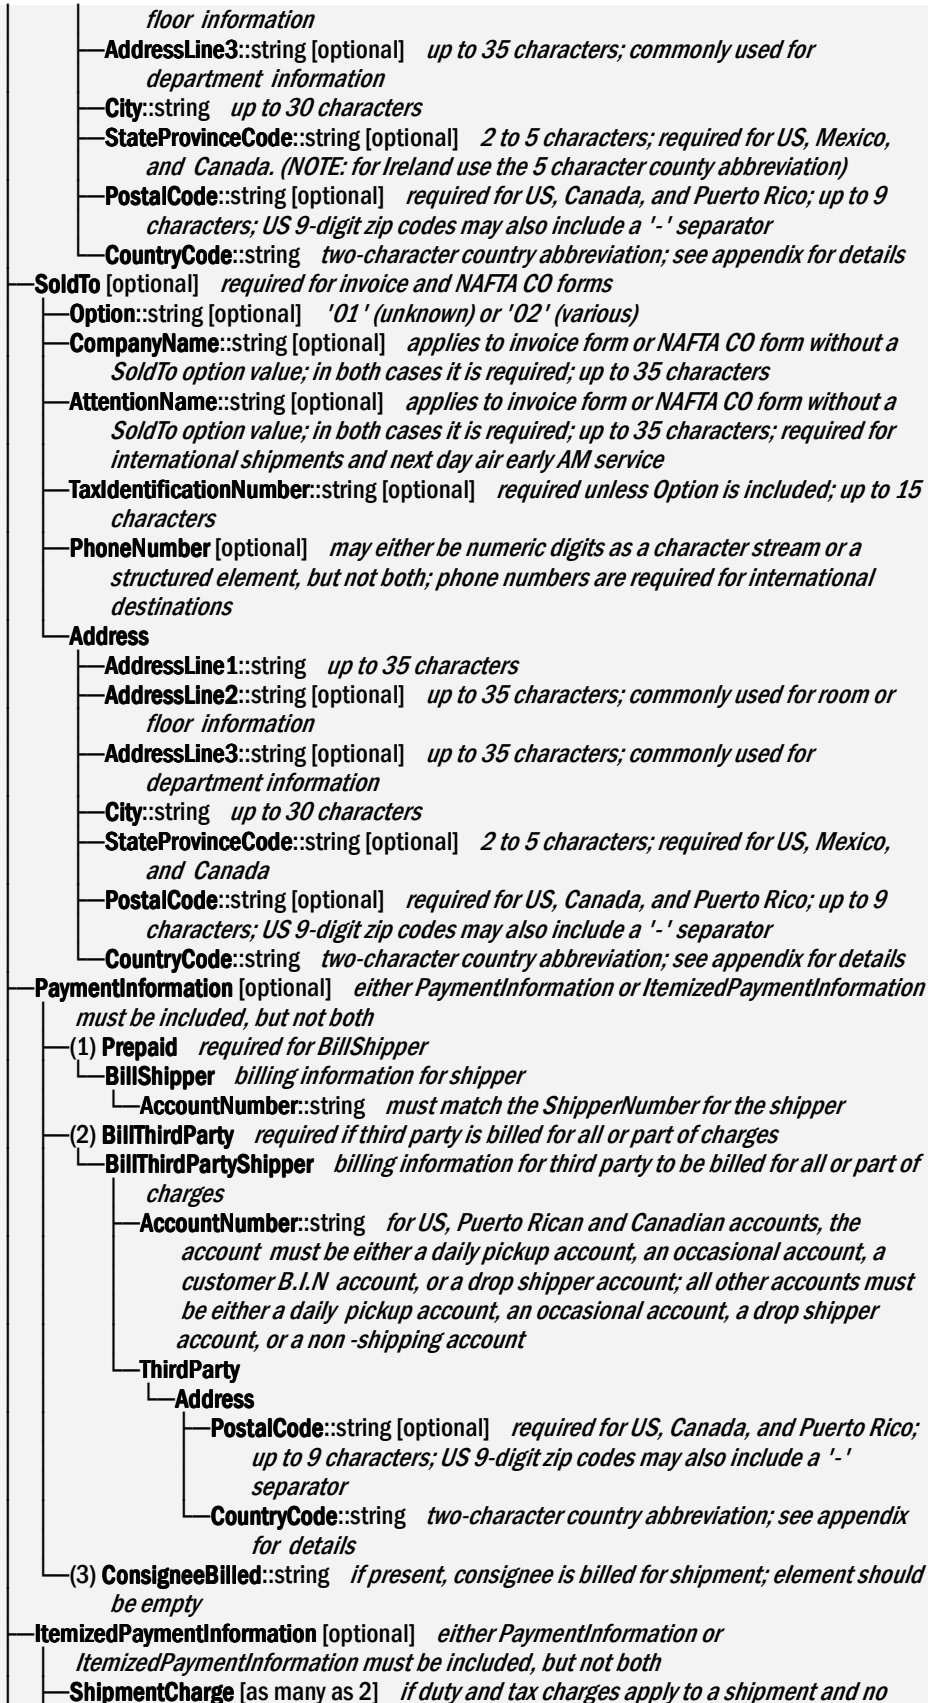

```

    AddressLine2::string [optional] up to 35 characters; commonly used for room or
    floor information
    AddressLine3::string [optional] up to 35 characters; commonly used for
    department information
    City::string up to 30 characters
    StateProvinceCode::string [optional] 2 to 5 characters; required for US, Mexico,
    and Canada
    PostalCode::string [optional] required for US, Canada, and Puerto Rico; up to 9
    characters; US 9-digit zip codes may also include a '-' separator
    CountryCode::string two-character country abbreviation; see appendix for details
  ShipTo return to address or destination of shipment
    CompanyName::string up to 35 characters
    AttentionName::string [optional] up to 35 characters; required for international
    shipments and next day air early AM service
    TaxIdentificationNumber::string [optional] up to 15 characters
    PhoneNumber [optional] may either be numeric digits as a character stream or a
    structured element, but not both; phone numbers are required for international
    destinations
    StructuredPhoneNumber [optional]
      PhoneCountryCode::string [optional] up to 3 characters; defaults to '1'
      PhoneDialPlanNumber::string up to 15 characters
      PhoneLineNumber::string up to 15 characters
      PhoneExtension::string [optional] up to 4 characters
    FaxNumber::string [optional] up to 15 digits
    EMailAddress::string [optional] up to 50 characters
    Address
      AddressLine1::string up to 35 characters
      AddressLine2::string [optional] up to 35 characters; commonly used for room or
      floor information
      AddressLine3::string [optional] up to 35 characters; commonly used for
      department information
      City::string up to 30 characters
      StateProvinceCode::string [optional] 2 to 5 characters; required for US, Mexico,
      and Canada. (NOTE: for Ireland use the 5 character county abbreviation)
      PostalCode::string [optional] required for US, Canada, and Puerto Rico; up to 9
      characters; US 9-digit zip codes may also include a '-' separator
      CountryCode::string two-character country abbreviation; see appendix for details
      ResidentialAddress if present, address is for a residence
    LocationID::string [optional] 3-10 characters; restricted to numbers or upper case
    letters
  ShipFrom pickup from address. The shipment will be rated from this origin address to the
  destination ship to/return to address.
    CompanyName::string up to 35 characters
    AttentionName::string [optional] up to 35 characters; required for international
    shipments and next day air early AM service
    TaxIdentificationNumber::string [optional] required for SED forms; up to 15 characters
    PhoneNumber [optional] may either be numeric digits as a character stream or a
    structured element, but not both; phone numbers are required for international
    destinations
    StructuredPhoneNumber [optional]
      PhoneCountryCode::string [optional] up to 3 characters; defaults to '1'
      PhoneDialPlanNumber::string up to 15 characters
      PhoneLineNumber::string up to 15 characters
      PhoneExtension::string [optional] up to 4 characters
    FaxNumber::string [optional] up to 15 digits
    Address
      AddressLine1::string up to 35 characters
      AddressLine2::string [optional] up to 35 characters; commonly used for room or

(Return) ShipmentAcceptRequest

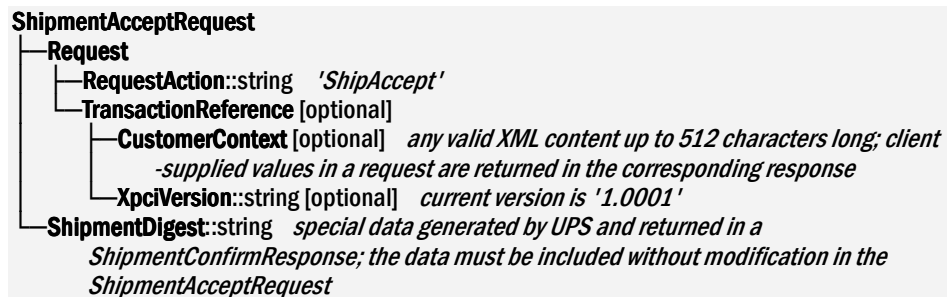

The ShipmentAcceptRequest message consists of two complete XML documents. The first document is an AccessRequest. The AccessRequest is immediately followed by a ShipmentAcceptRequest. When a client application is undergoing testing and integration, the document combination should be sent to the URL:

<https://wwwcie.ups.com/ups.app/xml/ShipAccept>

Once a client application is in production, the combined documents should be sent to the URL provided as part of the certification process.

The ShipmentAcceptRequest document in the request must conform to the following XML structure.

(Return) ShipmentAcceptRequest XML Details:

(Return) ShipmentAcceptRequest Example Message:

```

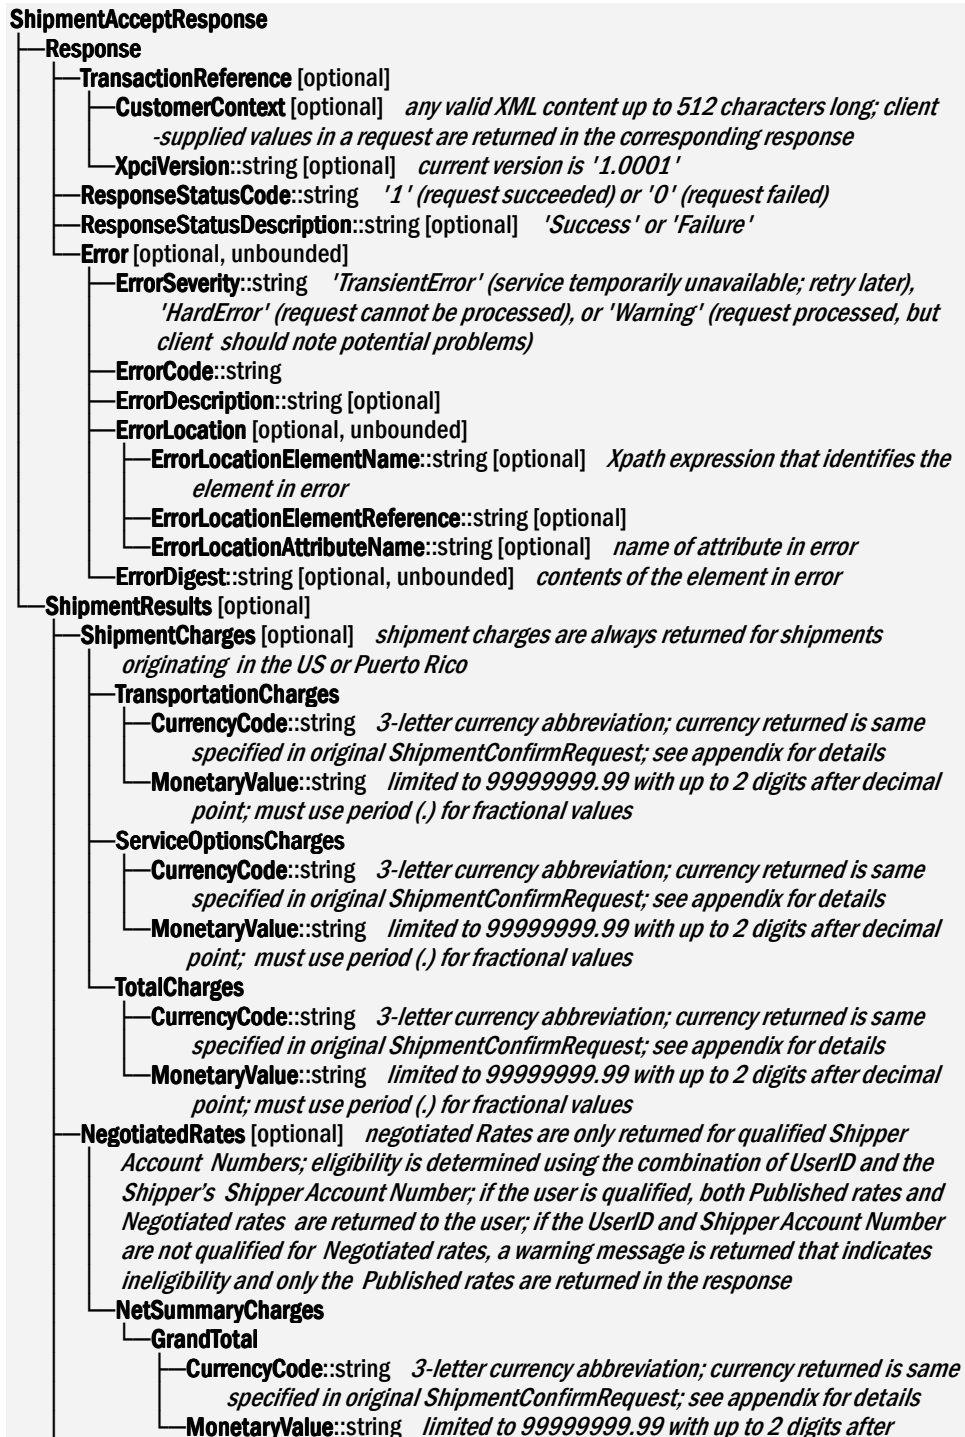

<?xml version="1.0" ?>
<AccessRequest xml:lang='en-US'>

Cancelling Shipments

UPS OnLine Tools use a two-message exchange to cancel a shipment. Those messages are VoidShipmentRequest and VoidShipmentResponse.

VoidShipmentRequest

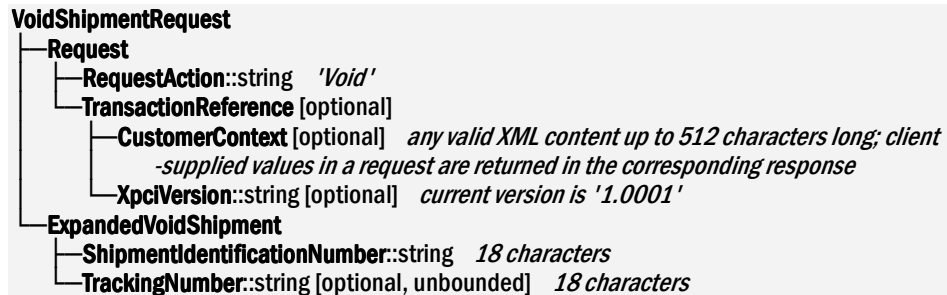

The VoidShipmentRequest message consists of two complete XML documents. The first document is an AccessRequest. The AccessRequest is immediately followed by a VoidShipmentRequest. When a client application is undergoing testing and integration, the document combination should be sent to the URL:

<https://wwwcie.ups.com/ups.app/xml/Void>

Once a client application is in production, the combined documents should be sent to the URL provided as part of the certification process.

The VoidShipmentRequest document in the request must conform to the following XML structure.

VoidShipmentRequest XML Details:

VoidShipmentRequest Example Message:

```

<?xml version="1.0" ?>
<AccessRequest xml:lang='en-US'>
  <AccessLicenseNumber>YOURACCESSLICENSENUMBER</AccessLicenseNumber>
  <UserId>YOURUSERID</UserId>
  <Password>YOURPASSWORD</Password>
</AccessRequest>
<?xml version="1.0" encoding="UTF-8" ?>
<VoidShipmentRequest>
  <Request>
    <TransactionReference>
      <CustomerContext>Customer Transaction ID</CustomerContext>
      <XpciVersion>1.0001</XpciVersion>
    </TransactionReference>
    <RequestAction>Void</RequestAction>
    <RequestOption />
  </Request>
  <ExpandedVoidShipment>
    <ShipmentIdentificationNumber>
      1Z12345E2318693258
    </ShipmentIdentificationNumber>
    <TrackingNumber>1Z12345E0390819985</TrackingNumber>
    <TrackingNumber>1Z12345E0193078536</TrackingNumber>
  </ExpandedVoidShipment>
</VoidShipmentRequest>
  
```

VoidShipmentResponse

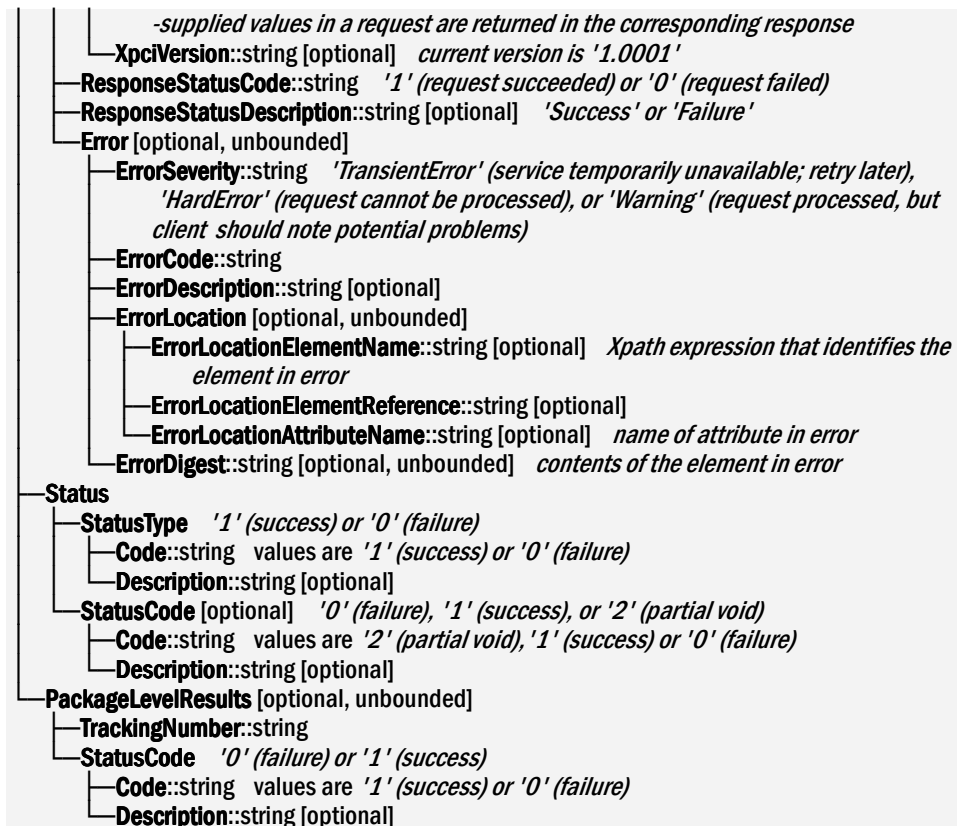

The VoidShipmentResponse message contains a single XML document that conforms to the following structure.

VoidShipmentResponse XML Details:

1 2 3 4 5 6 7

1 2 3 4 5 6 7

VoidShipmentResponse Example Message:

```
<?xml version="1.0" ?>
<VoidShipmentResponse>
  <Response>
    <TransactionReference>
      <CustomerContext>Customer Transaction ID</CustomerContext>
      <XpciVersion>1.0001</XpciVersion>
    </TransactionReference>
    <ResponseStatusCode>1</ResponseStatusCode>
    <ResponseStatusDescription>Success</ResponseStatusDescription>
  </Response>
  <Status>
    <StatusType>
      <Code>1</Code>
      <Description>Success</Description>
    </StatusType>
    <StatusCode>
      <Code>1</Code>
      <Description>Success</Description>
    </StatusCode>
  </Status>
</VoidShipmentResponse>
```

International Forms

The InternationalForms element may be part of ShipmentConfirmRequest messages for both forward and return shipments. When the element is

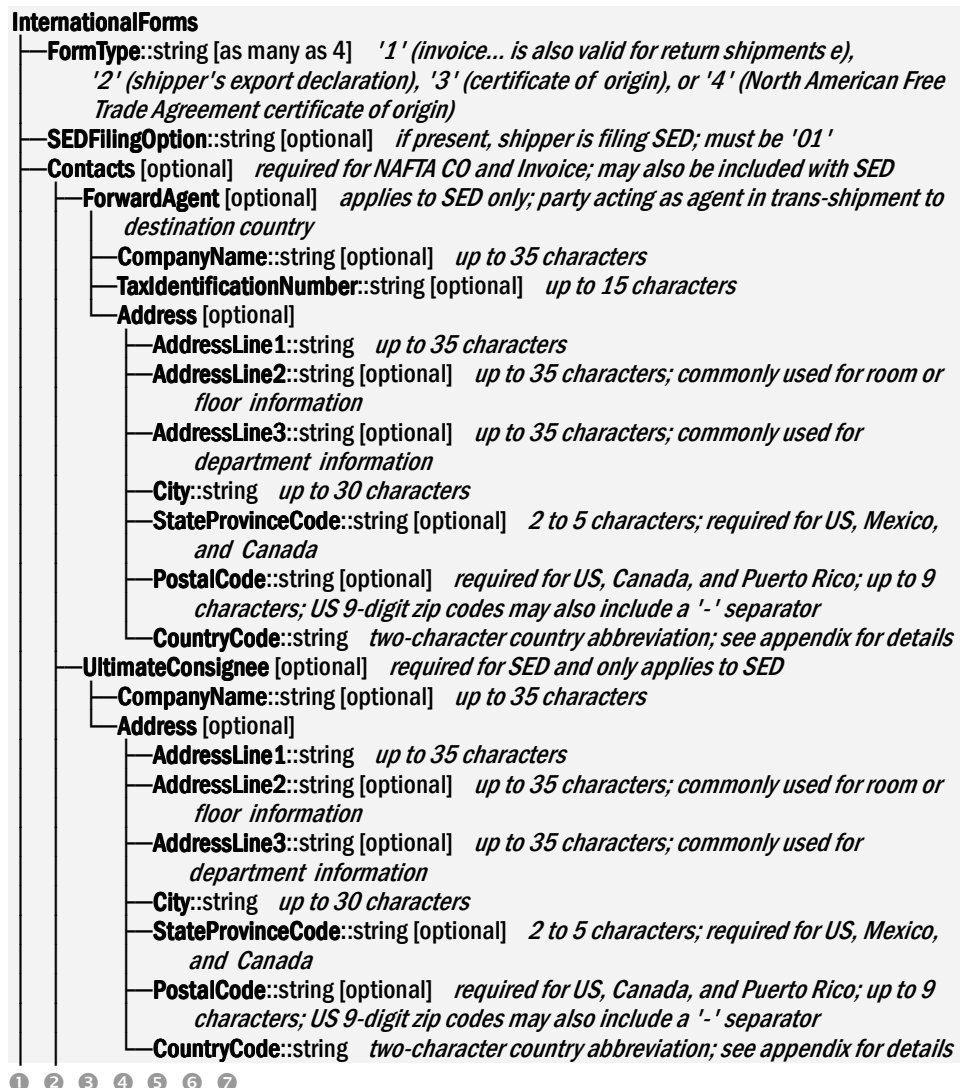

present, the client application requests UPS to prepare international forms, including Certificate of Origin (CO), Invoice, North American Free Trade Agreement Certificate of Origin (NAFTA CO), or Shipper's Export Declaration (SED). The complete components of this element follow the structure below.

Note: When creating paperless invoices refer to Appendix I: Countries that Accept Paperless invoices. (Page 107).

Shipment Confirm International Forms

The ShipmentConfirmResponse message contains a single XML document that conforms to the following structure.

InternationalForms XML Details:

1 2 3 4 5 6 7

- IntermediateConsignee [optional] *applies to SED only*
 - CompanyName::string [optional] *up to 35 characters*
 - Address [optional]
 - AddressLine1::string *up to 35 characters*
 - AddressLine2::string [optional] *up to 35 characters; commonly used for room or floor information*
 - AddressLine3::string [optional] *up to 35 characters; commonly used for department information*
 - City::string *up to 30 characters*
 - StateProvinceCode::string [optional] *2 to 5 characters; required for US, Mexico, and Canada*
 - PostalCode::string [optional] *required for US, Canada, and Puerto Rico; up to 9 characters; US 9-digit zip codes may also include a '-' separator*
 - CountryCode::string *two-character country abbreviation; see appendix for details*
- Producer [optional] *required for NAFTA CO and only applies to NAFTA CO*
 - Option::string [optional] *'01' (available to customs on request), '02' (same as exporter), '03' (attached list), or '04' (unknown)*
 - CompanyName::string [optional] *required if producer option is not present or empty; up to 35 characters*
 - Address [optional] *required if producer option is not present or empty*
 - AddressLine1::string *up to 35 characters*
 - AddressLine2::string [optional] *up to 35 characters; commonly used for room or floor information*
 - AddressLine3::string [optional] *up to 35 characters; commonly used for department information*
 - City::string *up to 30 characters*
 - StateProvinceCode::string [optional] *2 to 5 characters; required for US, Mexico, and Canada*
 - PostalCode::string [optional] *required for US, Canada, and Puerto Rico; up to 9 characters; US 9-digit zip codes may also include a '-' separator*
 - CountryCode::string *two-character country abbreviation; see appendix for details*
 - TaxIdentificationNumber::string [optional] *up to 15 characters*
- Product [as many as 50] *applies to SED, Invoice, CO, and NAFTA CO*
 - Description::string [as many as 3]
 - Unit [optional] *'BA' (Barrel), 'BE' (Bundle), 'BG' (Bag), 'BH' (Bunch), 'BOX' (Box), 'BT' (Bolt), 'BU' (Butt), 'BX' (Box), 'CI' (Canister), 'CM' (Centimeter), 'CON' (Container), 'CR' (Crate), 'CS' (Case), 'CT' (Carton), 'CY' (Cylinder), 'DOZ' (Dozen), 'EA' (Each), 'EN' (Envelope), 'FT' (Feet), 'KG' (Kilogram), 'KGS' (Kilograms), 'LB' (Pound), 'LBS' (Pounds), 'L' (Liter), 'M' (Meter), 'NMB' (Number), 'PA' (Packet), 'PAL' (Pallet), 'PC' (Piece), 'PCS' (Pieces), 'PF' (Proof Liters), 'PK' (Package), 'PKG' (Package), 'PR' (Pair), 'PRS' (Pairs), 'RL' (Roll), 'SET' (Set), 'SME' (Square Meters), 'SYD' (Square Yards), 'TU' (Tube), 'YD' (Yard), 'OTH' (Other, in which case Description is required)*
 - Number::string
 - Value::string
 - UnitOfMeasurement
 - Code::string
 - Description::string [optional]
 - CommodityCode::string [optional] *applies to invoice and NAFTA CO; required for NAFTA CO; 6 to 15 characters; international commodity or harmonized code*
 - PartNumber::string [optional] *applies to Invoice; up to 10 characters*
 - OriginCountryCode::string [optional] *applies to Invoice and NAFTA CO; required for Invoice; required for NAFTA CO unless JointProductionIndicator is present*
 - JointProductionIndicator [optional] *applies to NAFTA CO*
 - NetCostCode::string [optional] *applies to NAFTA CO, for which it is required; 'NC' (regional value content calculated using net cost method) or 'NO' (otherwise)*
 - NetCostDateRange [optional] *applies to NAFTA CO*
 - BeginDate::string *format is 'YYYYMMDD'*

1 2 3 4 5 6 7

1 2 3 4 5 6 7

- └─ **EndDate**::string *format is 'YYYYMMDD'*
- ─ **PreferenceCriteria**::string [optional] *applies to NAFTA CO, for which it is required; 'A' through 'F'; see appendix for details*
- ─ **ProducerInfo**::string [optional] *applies to NAFTA CO, for which it is required; 'Yes' (shipper is producer), 'No[1]' (CO based on knowledge of whether the good qualifies as an originating good), 'No[2]' (CO relies on producer's written representation that good qualifies as originating good), or 'No[3]' (complete and signed CO provided to exporter by producer)*
- ─ **MarksAndNumbers**::string [optional] *applies to CO only; distinguishing marks or numbers appearing on package*
- ─ **NumberOfPackagesPerCommodity**::string [optional] *applies to CO only, for which it is required; up to three digits*
- ─ **ProductWeight** [optional] *only applies to SED and CO forms, for which it is required; weight including container(s) but not carrier equipment; units are 'KGS' or 'LBS'; weight is limited to 5 characters with up to one digit after decimal point*
 - └─ **UnitOfMeasurement** [optional]
 - └─ **Code**::string
 - └─ **Weight**::string *up to 5 characters; up to one digit after the decimal place*
- ─ **VehicleID**::string [optional] *only applies to SED forms; up to 25 characters; Vehicle Identification Number (VIN), product identification number for self-propelled vehicles without a VIN, or vehicle title number*
- ─ **ScheduleB** [optional] *only applies to SED forms, for which it is required*
 - └─ **Number**::string *exactly 10 characters*
 - └─ **Quantity**::string *how many of specified unit; for example, if unit is dozens, this value is how many dozens; required unless unit of measurement is 'X'*
 - └─ **UnitOfMeasurement**
 - └─ **Code**::string *'BBL' (Barrel), 'CAR' (Carat), 'CM2' (Square Centimeter), 'CTN' (Content Ton), 'CUR' (Curie), 'CYK' (Clear Yield Kilogram), 'DOZ' (Dozen), 'DPC' (Dozen Pieces), 'DPR' (Dozen Pairs), 'FBM' (Fiber Meter), 'GCN' (Gross Containers), 'GM' (Gram), 'GRS' (Gross), 'HUN' (Hundreds), 'KG' (Kilograms), 'KM3' (1,000 Cubic Meters), 'KTS' (Kilogram Total Sugars), 'L' (Liter), 'M' (Meter), 'M2' (Square Meters), 'M3' (Cubic Meters), 'MC' (Millicurie), 'NO' (Number), 'PCS' (Pieces), 'PFL' (Proof Liter), 'PK' (Pack), 'PRS' (Pairs), 'RBA' (Running Bales), 'SQ' (Squares), 'T' (Tons), 'THS' (thousands), 'X' (No quantity required))*
- ─ **ExportType**::string [optional] *applies to SED forms, for which it is required; 'D' (domestic), 'F' (foreign), or 'M' (foreign military); domestic exports are produced, manufactured, or grown in the United States or Puerto Rico, including merchandise which has been enhanced in value or changed from its imported form by further processing or manufacture in the United States or Puerto Rico; foreign exports are exported from the United States in the same form as their import; foreign military exports are sold under a foreign military sales program*
- ─ **SEDTotalValue**::string [optional] *applies to SED forms, for which it is required; up to 15 characters, with up to 2 digits after decimal place; always in US dollars*
- ─ **InvoiceNumber**::string [optional] *applies to Invoice only*
- ─ **InvoiceDate**::string [optional] *applies to Invoice only; required for forward shipments; will always be returned blank on return service; format is 'YYYYMMDD'*
- ─ **PurchaseOrderNumber**::string [optional] *applies to Invoice only*
- ─ **TermsOfShipment**::string [optional] *applies to Invoice only; 'CFR' (Cost and Freight), 'CIF' (Cost, Insurance and Freight), 'CIP' (Carriage and Insurance Paid), 'CPT' (Carriage Paid To), 'DAF' (Delivered at Frontier), 'DDP' (Delivered Duty Paid), 'DDU' (Delivered Duty Unpaid), 'DEQ' (Delivered Ex Quay), 'DES' (Delivered Ex Ship), 'EXW' (Ex Works), 'FAS' (Free Along Side), 'FCA' (Free Carrier), 'FOB' (Free On Board)*

Error Codes

To discover errors, check the `ResponseStatusCode` element. A “1” normally indicates a successful response, whereas a “0” indicates an error, either Transient or Hard. When an error occurs there will also be an error code, and an error description.

- Success – Successful responses may or may not include **Warnings**.
 - (without warnings) Request is processed as anticipated by the client.
 - (with warnings) *Warning* messages indicate that UPS was able to process the request; however (potentially) unanticipated results have also occurred. The warning contains information in the response that should be passed to the end user.
- Errors – will return two different levels of severity.
 - *Transient* errors are temporary errors, due to temporary high server loads or scheduled maintenance, for example. The application may re-issue the request at a later time.
 - *Hard* errors indicate that an error existed in the request that UPS could not resolve. These errors are critical and prevent requests from processing.

Applications should not re-issue requests with Hard errors without first correcting the error.

The following table lists the errors that UPS may return in response to a request.

Code	Severity	Explanation
10001	Hard	The XML document is not well formed
10002	Hard	The XML document is well formed but the document is not valid
120001	Transient	XML Shipping System is unavailable, please try again later.
120014	Warning	A Large Air Package Minimum Surcharge has been applied to Package %package.index%.
120016	Warning	Customs Invoice is required when the shipment is tendered to shipment
120017	Warning	If the value of the goods you are shipping is above 6,000 Euro or local equivalent, you must supply an EUR1 form in addition to signing your invoice.
120019	Warning	The location ID you provided is not valid. Valid location ID consists of 3 to 10 alpha numeric characters.
120020	Hard	Max packages per shipment exceeded.
120021	Hard	The same shipment cannot be requested to be created more than once.
120022	Warning	For packages with high value report: give them to a UPS driver or UPS Customer Center representative to ensure he signs one copy of the receipt and returns it to you.

Code	Severity	Explanation
		This is your proof that UPS has accepted the package(s), and will be required for submitting a claim.
120050	Hard	RequestAction has an unsupported value.
120051	Hard	Invalid RequestOption
120100	Hard	Missing/Invalid shipper number
120101	Hard	Missing/Invalid shipper name
120102	Hard	Missing/Invalid shipper address line 1
120103	Hard	Invalid shipper address line 2
120104	Hard	Invalid shipper address line 3
120105	Hard	Missing/Invalid Shipper City
120106	Hard	Missing/Invalid Shipper StateProvinceCode
120107	Hard	Missing/Invalid Shipper PostalCode. (Description)
120108	Hard	Missing/Invalid Shipper CountryCode
120109	Hard	Missing/Invalid Shipper PhoneNumber
120110	Hard	Missing/Invalid Shipper AttentionName
120111	Hard	Shipper EmailAddress cannot exceed a length of 50 characters
120112	Hard	Shipper EmailAddress is an invalid format
120113	Hard	Shipper number must contain alphanumeric characters only
120114	Hard	Shipper phone extension cannot exceed the length of 4.
120115	Hard	Shipper PhoneNumber must be at least 10 alphanumeric characters
120116	Hard	Shipper phone extension must contain only numbers
120117	Hard	Shipper phone extension is allowed only if the shipper is located in US, Puerto Rico or Canada
120118	Hard	Shipper phone extension is only valid if a phone number is given
120119	Hard	Shipper phone number and phone extension together cannot be more than 15 digits long
120120	Hard	The country associated with Shipper's ShipperNumber must be the same as the shipments ShipFrom's country.
120121	Hard	The Shipper's shipper number cannot be used for the shipment.
120122	Hard	Invalid Shipper ShipperNumber
120200	Hard	Missing/Invalid ShipTo CompanyName
120201	Hard	Missing/Invalid ShipTo AttentionName
120202	Hard	Missing/Invalid ShipTo AddressLine1
120203	Hard	Invalid ShipTo AddressLine2

Customer Integration Environment

The Customer Integration Environment (CIE) allows customers to test their application prior to launch. This environment is intended for integration testing of customer applications with the UPS servers. No stress testing should ever be performed by customers against any UPS systems.

Once your application has been thoroughly tested, you should redirect the application to the UPS Production Environment.

Please note that while CIE maintains system availability 24 hours, 7 days each week, there are occasional system down times to allow for server maintenance.

Negotiated Rates

Negotiated Rates are available in the UPS Customer Integration Environment (CIE) and are returned when the Negotiated Rate indicator is provided in the ShipConfirm request. The Negotiated Rates returned *do not reflect the contractual rate and may vary*. (A flat 1% discount is returned)

Also in the Customer Integration Environment the shipper eligibility for Negotiated Rates is not fully verified. For shipper eligibility requirements refer to Negotiated Rates section within UPS Rates & Service Guide.

Shipping

Test your Shipping application using valid and invalid date elements including postal codes, weights and package types. This will ensure that your application has the ability to process success and error responses correctly.

Verifying Shipping Rates

Shipping rates quoted are estimates based on the information supplied. Other shipping charges may apply and the final shipping charge may differ depending upon UPS Account Number and how the package is tendered to UPS. Please see the applicable UPS Rate and Service Guide for details.

When comparing shipment charges between applications and tools providing UPS rates, be sure that the requests are identical. Working through any discrepancies will require knowledge of all parameters posted along with defaults, numeric rounding, and rate table used by the applications being compared.

For more information on UPS Services, refer to the UPS Service Guide at:

<http://www.ups.com/using/svc-index.html>.

You can check your results against the UPS Quick Cost Calculator™ web application located at:

<http://wwwapps.ups.com/servlet/QCCServlet>

For integration testing, you should direct your test Shipping software to:

<https://wwwcie.ups.com/ups.app/xml/ShipConfirm>

Once you have completed your testing and Certification, you should direct your software to:

<https://onlinetools.ups.com/ups.app/xml/ShipConfirm>

System Availability

The Customer Integration Environment is available 24 hours a day, 7 days a week.

Server Availability Check

All of the UPS services work using HTTPS POST. Using the same URL as you point your application to, perform an HTTPS GET. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path. To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/ups.app/xml/ShipConfirm>

The following will be returned:

Service Name: ShipConfirm
Remote User: null
Server Port: 443
Server Name: wwwcie.ups.com
Servlet Path: /ShipConfirm

Appendix A: Sample Shipping and Return Labels

The following figures show sample shipping and return labels that UPS provides.

Appendix B: Shipping and Tracking Numbers for Void Testing

UPS has set aside several shipping identification and tracking numbers to help developers test their applications. These special numbers are only valid with the Customer Integration Environment at wwwcie.ups.com. The following table lists those special numbers and describes the results that developers should expect when attempting a VoidShipmentRequest. For each test case, the first number listed is a shipment identification number; additional numbers, if present, are tracking numbers.

Note that only these numbers may be used in the Customer Integration Environment when voiding shipments.

Number(s)	Description	Expected Result
1Z12345E0390817264	Single package shipment sent via UPS Ground.	Request is processed, and shipment is voided.
1Z12345E0193075279	Single package shipment sent via Next Day Air.	Request is processed, and shipment is voided.
1Z12345E0392508488	Single package shipment sent via UPS Ground for which the allotted time period for voiding the shipment has expired.	Error 190101, Time for voiding has expired.
1Z12345E1290420899	Shipment that has already been picked up by the UPS service provider.	Error 190103, A completed order cannot be voided.
1Z12345E0390856432	Shipment that can be voided at the shipment level.	A successful shipment voided XML response will be returned for a shipment level void request.
1Z12345E0193081456	Shipment that can be voided at the shipment level.	A successful shipment voided XML response will be returned for a shipment level void request.
1Z12345E1234567890, 1Z12345E1234567890	Multi-package shipment where the request will void only one of the packages associated with the shipment.	A successful shipment partially voided XML response will be returned for a package level void request. The request will void only one of multiple packages in the shipment. The shipment will be "partially" voided.
1Z12345E2318693258, 1Z12345E0193072168	Multi-package shipment with all, save one, of the packages already voided. The request will void the remaining package.	A successful shipment voided XML response will be returned for a package level void request. The request will void the only remaining package in the shipment. The shipment will be completely voided.
1Z12345E1234567890,	Multi-package shipment	A successful shipment

1Z12345E8635481269, 1Z12345E1593518308	with a package that cannot be voided.	partially voided XML response will be returned for a package level void request. Tracking number 1Z12345E1593518308 will not be voided.
1Z12345E2318693258, 1Z12345E0390819985, 1Z12345E0193078536	Multi-package shipment with two packages that remain unvoided.	A successful shipment voided XML response will be returned for a package level void request. The request will void all of the remaining packages in the shipment. The shipment will be completely voided.
1Z12345E8793628675	A shipment uploaded more than 28 days previously.	A failed XML response will be returned. Error Code 190101, Time for voiding has expired.
1Z12345E1234567890, 1Z12345E0392508253	This tracking number does not belong to the shipment.	Package void will fail to void any packages when an invalid package tracking number is provided. A failed XML response will be returned. Error Code 190110, Invalid Package Void.
1Z12345E2318693258, 1Z12345E0392506486	Return shipment.	Return shipments cannot be voided at the package level. A failed XML response will be returned. Error Code 190112, Return Service Shipments cannot be Voided at the Package Level.

Appendix C: UPS Service Codes

UPS offers a wide variety of package delivery services. The following tables list the service code values for these services; they are ordered by the origin of the shipment. The final table lists service codes for freight shipments. For more information on UPS services, refer to the latest *UPS Rate and Service Guide* available at <http://www.ups.com>.

Code	United States Domestic Shipments
------	----------------------------------

01	UPS Next Day Air®
02	UPS Second Day Air®
03	UPS Ground
12	UPS Three-Day Select®

Appendix D: Reference Number Codes

Shipments and packages may include a reference number. The type of reference number may be indicated by a reference number code. The following table lists the reference number code values.

Code	Reference Number Type
AJ	Accounts Receivable Customer Account
AT	Appropriation Number
BM	Bill of Lading Number
9V	Collect on Delivery (COD) Number
ON	Dealer Order Number
DP	Department Number
3Q	Food and Drug Administration (FDA) Product Code
IK	Invoice Number
MK	Manifest Key Number
MJ	Model Number
PM	Part Number
PC	Production Code
PO	Purchase Order Number
RQ	Purchase Request Number
RZ	Return Authorization Number
SA	Salesperson Number
SE	Serial Number
ST	Store Number
TN	Transaction Reference Number

Appendix E: Country Codes

UPS country code abbreviations generally follow the recommendations of the International Standards Organization, which publishes a list of currency abbreviations in ISO Standard 3166. The following table lists the ISO country codes that ISO had defined when this document was published. The latest information is available from the [ISO web site](http://www.iso.org).

Please note that not all UPS services are available in every country. For more information on UPS services, refer to the latest *UPS Rate and Service Guide* available at <http://www.ups.com>.

Appendix F: Currency Codes

UPS currency code abbreviations generally follow the recommendations of the International Standards Organization, which publishes a list of currency abbreviations in ISO Standard 4217, for which the latest information is available from the [ISO web site](#). Exceptions are noted in bold in the table below.

Note that countries sometimes change their official currency. UPS may require some time after the introduction of a new currency before it can fully support that currency. In addition, UPS may continue to support the older currency for an interim period in order to provide backwards compatibility. UPS may also require the use of currencies other than the official currency for some countries. For the latest information, please contact your UPS OnLine Tools representative.

Country / Region	Currency	Code

Appendix G: Export License Exception Codes

License exception codes may be used in lieu of an export license in Shipper Export Declaration (SED) forms. The following table lists the defined export codes.

Code	License Exception
AGR	Established for agricultural commodities to permit exports and re-exports to Cuba that is not specifically identified on the Commerce Control List (CCL) and is classified as EAR99.
APR	Items for export or re-export not controlled for nuclear nonproliferation, missile technology or crime control.
AVS	U.S. aircraft or foreign sojourn into foreign country.
BAG	Individual or exporting carriers crew members baggage.
CIV	National security items for civil end users.
CTP	Computer and parts of.
ENC	Encrypted software and hardware - financial institutions.
GBS	Export or re-export of Country Group B; controlled for national security reasons.
GFT	Gift shipments; packages to individuals, religious, charitable or education institutions, donations of basic needs.
GOV	Government shipments, covers shipments for U.S. government agencies, personnel or of cooperating foreign governments.
KMI	Encrypted software and hardware.
LVS	Value of shipments limited.
NLR	No license required.
RPL	Servicing and replacement of parts and equipment, one for one replacement parts service or replacement of equipment.
TMP	Temporary exports, export and re-export of items temporary in U.S., export and re-export of beta test software.
TSPA	Software or technology outside the scope of export regulations.
TSR	Technology and software, national security reason, Country Group B.
TSU	Technology and software shipments, of basic requirements, data supporting prospective or actual bids, offers to sell, lease or supply an item. Software update for fixing programs, mass marketed software.

Appendix H: International Forms Preference Criteria

Preference criteria are required in North American Free Trade Agreement Certificate of Origin (NAFTA CO) documents. The following table lists the defined criteria and their use.

Criteria	Meaning
A	The good is "wholly obtained or produced entirely" in the territory of one or more of the NAFTA countries as referenced in Article 415. Note: The purchase of a good in the territory does not necessarily render it "wholly obtained or produced." If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(a) and 415)
B	The good is produced entirely in the territory of one or more of the NAFTA countries and satisfies the specific rule of origin, set out in Annex 401, that applies to its tariff classification. The rule may include a tariff classification change, regional value-content requirement, or a combination there-of. The good must also satisfy all other applicable requirements of Chapter Four. If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(b))
C	The good is produced entirely in the territory of one or more of the NAFTA countries exclusively from originating materials. Under this criterion, one or more of the materials may not fall within the definition of "wholly produced or obtained," as set out in Article 415. All materials used in the production of the good must qualify as "originating" by meeting the rules of Article 401(a) through (d). If the good is an agricultural good, see also criterion F and Annex 703.2. Reference: Article 401(c).
D	Goods are produced in the territory of one or more of the NAFTA countries but do not meet the applicable rule of origin, set out in Annex 401, because certain non-originating materials do not undergo the required change in tariff classification. The goods do nonetheless meet the regional value-content requirement specified in Article 401 (d). This criterion is limited to the following two circumstances: (1) The good was imported into the territory of a NAFTA country in an unassembled or disassembled form but was classified as an assembled good, pursuant to H.S. General Rule of Interpretation 2(a). or (2) .The good incorporated one or more non-originating materials, provided for as parts under the H.S., which could not undergo a change in tariff classification because the heading provided for both the good and its parts and was not further subdivided into subheadings, or the subheading provided for both the good and its parts and was not further subdivided. Note: This criterion does not apply to Chapters 61 through 63 of the H.S. (Reference: Article 401(d))
E	Certain automatic data processing goods and their parts, specified in Annex 308.1, that do not originate in the territory are considered originating upon importation into the territory of a NAFTA country from the territory of another NAFTA country when the most-favored-nation tariff rate of the good conforms to the rate established in Annex 308.1 and is common to all NAFTA countries. (Reference: Annex 308.1)
F	The good is an originating agricultural good under preference criterion A, B, or C above and is not subject to a quantitative restriction in the

Criteria	Meaning
	<p>importing NAFTA country because it is a "qualifying good" as defined in Annex 703.2, Section A or B (please specify). A good listed in Appendix 703.2B.7 is also exempt from quantitative restrictions and is eligible for NAFTA preferential tariff treatment if it meets the definition of "qualifying good" in Section A of Annex 703.2.</p> <p>Note: This criterion does not apply to goods that wholly originate in Canada or the United States and are imported into either country.</p> <p>Note: A tariff rate quota is not a quantitative restriction.</p>

Appendix I: Countries that Accept Paperless Invoices

The following table lists those countries that support paperless (electronic submission) invoices.

Albania
Angola
Argentina
Austria
Bahamas
Barbados
Belarus
Belgium
Bermuda
Bhutan
Bolivia
Bosnia
Brazil
Canada
China
Colombia
Costa Rica
